

Lead Scoring Assignment-Subjective Answers

Question 1:

Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?

Answer :

Based on the analysis and model observations, the top variables contributing toward lead conversion are:

- Total Time spent on Website
- Total Visits
- Lead Source

These variables indicate customer engagement and interest level.

Question 2:

What are the top 3 categorical/dummy variables in the model which should be focused the most on to increase the probability of lead conversion?

Answer :

The top categorical/dummy variables that should be focused on are:

- Lead Source
- Last Activity
- Lead Origin

These variables help identify customer behavior patterns and improve targeting strategies for lead conversion.

Question 3:

X Education has a period of 2 months every year during which they hire some interns. The sales team has around 10 interns allotted to them. So, during this phase, they wish to make the lead conversion more aggressive. So, they want almost all the potential leads (i.e., the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

Answer :

During the internship hiring period , the company should focus on maximizing recall. The sales team should contact almost all leads predicted as potential customers by the model. Since additional interns are available, the company can afford to make more calls and capture maximum possible conversions, even if some non- converting leads are contacted. This strategy helps increase overall lead conversion during the aggressive sales phase.

Question 4:

Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So, during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e., they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

Answer :

When the company has already achieved its quarterly target, the focus should shift toward maximizing precision. The sales team should contact only highly probable leads predicted by the model. This will reduce unnecessary calls, save time, and improve operational efficiency . By focusing only on high-quality leads, the company can minimize useless phone calls and better utilize its resources.
